

Project Design Phase-II

Data Flow Diagram & User Stories

Date	30 September 2026
Team ID	SWTID-2026-3807
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

User Stories:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
IT Support Staff	Ticket Classification	USN-1	As an IT staff member, I want tickets to be automatically classified based on keywords in the short description.	Tickets are auto-assigned Category and Subcategory correctly.	High	Sprint-1
IT Support Staff	Email Notification	USN-2	As an IT staff member, I want the system to send an automated email to the caller after ticket creation.	Caller receives confirmation email immediately after submission.	High	Sprint-1
Student / Teacher	Ticket Submission	USN-3	As a user, I can submit an IT support ticket by entering my name and short description only.	Ticket is created successfully without manual category selection.	High	Sprint-1
Administrator	Flow Designer Configuration	USN-4	As an admin, I can configure Flow Designer to trigger classification when Category is empty.	Flow triggers correctly upon record creation.	Medium	Sprint-2
Administrator	Dependent Field Setup	USN-5	As an admin, I can set dependency between Category and Subcategory fields.	Subcategory options change dynamically based on Category.	Medium	Sprint-2
IT Support Staff	Testing & Validation	USN-6	As an IT staff member, I can test ticket creation and verify auto-classification and email delivery.	Test cases pass with correct classification and email logs.	High	Sprint-3
