

Project Design Phase Solution Architecture

Date	30 September 2026
Team ID	SWTID-2026-3807
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Solution Architecture:

- Find the best technology solution to address the inefficiency of manual ticket classification by implementing Flow Designer with AI-driven automation.
- Describe the structure, characteristics, and behavior of the automated ticket classification system to stakeholders, showing how it integrates with existing ITSM platforms.
- Define the key features such as AI-based categorization, workflow automation, and seamless routing, along with development phases and solution requirements.
- Provide clear specifications for how tickets are analyzed, classified, and routed, ensuring the solution is well-defined, managed, and delivered effectively.

Example - Solution Architecture Diagram:

Figure 1: Architecture and data flow of the voice patient diary sample application
