

Full Stack Development Project Documentation

1. Introduction

- **Project Title:** Auto Ticket Classification using Flow Designer
- **Team Members:** Names and assigned roles

2. Project Overview

- The project automatically classifies support tickets based on the ticket description. ServiceNow Flow Designer identifies the issue category and subcategory using predefined rules and sends an email notification.

3. System Architecture

- **Frontend:** ServiceNow Ticket Creation Form
- **Backend:** Custom Ticket Table and Flow Designer
- **Database:** ServiceNow Custom Ticket Table
- **Automation:** Flow Designer

4. Setup Instructions

- **Prerequisites:** ServiceNow instance and required user access
- **Configuration:**
 - Create the custom ticket table and add required fields
 - Configure categories and subcategories
 - Create and activate the Flow Designer flow

5. Table Structure

- **Custom Table:** Incident WorkFlow
- **Fields:** Caller, Short Description, Category, Subcategory, Description, State, Assignment Group, Assigned To

6. Running the Application

- 1 Open the ticket creation form.
- 2 Enter the Caller and Short Description/Description.
- 3 Submit the ticket.
- 4 Flow Designer automatically identifies the category and subcategory.
- 5 The ticket is updated and an email notification is sent.

7. Automation Documentation

- **Trigger:** Record Created
- **Actions:** Read the ticket description, identify the issue type, set Category and Subcategory, send email notification
- **Classification Rules:** Wi-Fi Issue, Projector Issue, Password Issue, Slow Computer Issue

8. Authentication & Access

- ServiceNow provides user authentication.
- Roles and Access Controls restrict unauthorized access.
- Authorized users can create, view, and manage tickets.

9. User Interface

- Ticket creation form with Caller and description fields
- Category and Subcategory fields, State and Assignment fields
- Flow Designer configuration interface

10. Testing

- Create tickets with different issue descriptions.
- Verify the automatically assigned Category and Subcategory.
- Check ticket state and assignment details.
- Verify that the email notification is generated correctly.

11. Screenshots / Demo

- Ticket creation form, submitted ticket, automatic classification result
- Flow Designer workflow and email notification
- Demo link, if available

12. Known Issues

- Classification depends on predefined keywords and rules.
- Unrecognized descriptions may not be classified correctly.
- New issue types require additional classification rules.

13. Future Enhancements

- Automatic ticket assignment to appropriate teams
- SLA tracking and escalation
- AI/ML-based intelligent ticket classification
- Automatic priority prediction
- Advanced reporting and analytics
